I. Foreword

Congratulations on purchasing your new Raizer.

This is an original user manual for your new Raizer.

NB: It is important to read this manual before using the Raizer.

The Raizer is a battery-powered mobile lifting chair which raises a fallen person up to an almost standing position in a few minutes. It can be operated by only a single assistant and requires no physical input from the assistant aside from a helping hand.

The Raizer is simple to operate by means of the control panel mounted on the side of the seat, or via a remote control*.

*Supplementary equipment

1.1 Quick Guide

There is a supplementary Quick Guide in the pocket of the carrying bag.
You can store this user manual in the same place.

Scan to retrieve an extra Quick Guide
2. EC declaration of conformity

EC declaration of conformity
Directive 2006/42/CE

Manufacturer: Liftup A/S
Address: Hagensvej 21, DK-9530 Støvring
Telephone: +45 9686 3020

Hereby declares that:
Equipment: RAIZER®

Is in compliance with the provisions of the EC Directive on machinery according to directive 2006/42/CE

At the assessment the following has been used:
DS/EN ISO 10535 Hoist for the transfer of disabled persons – Requirements and test methods.

__________________________  __________________________
Director                  Flemming Eriksen

INSERT COPY OF CE-MARK HERE
4. Terms of use

The Raizer should only be used to bring a person lying on the floor to a seated or almost standing position, who cannot do so by themselves. The person may then require relocation from this position.

The max. load of the Raizer is 150kg with max. 1 person at a time on the chair. The max. load is also stated on the CE-mark on the rear of the seat. The Raizer can be used approx. 40 times at full load on a full charge. A charger is included with your Raizer.

Read this user manual thoroughly before using the device. The owner of the device is obliged to maintain it according to the maintenance guide in section 13.

6. Safety instructions

6.1 Assembly

Correct assembly

Incorrect assembly

Correct assembling of legs and back rest.

Incorrect assembling of legs and back rest.

Observe red marks on left-hand side
Observe green marks on right-hand side

6.2 Avoiding personal injury.

Although the Raizer comes fitted with various safety features never use it if unintended persons or animals are close by, as there may otherwise be a risk of crushing. **Never allow children to play with the Raizer.**
6.3 Overload.

In order to avoid damage to the device in the event of overload (max. 150kg), it is fitted with an overload cutout, which when triggered halts the lifting chair and issues an audible alarm. In the event of overload, run the chair down to the horizontal position/floor level.

With heavy loads on the Raizer, the chair may sink slowly if it is not in operation – this is completely normal. For safety reasons the Raizer is designed to sink slowly under heavy loads. This has been introduced in order to avoid mechanical breakage in the event of overload.

7. Personal safety

7.1 Avoiding personal injury

- To avoid personal injury it is NOT permitted to use the lifting chair when someone or something is at risk of being injured by crushing, cutting, falling, slipping, or similar.
- It is important that the assistant ensures that the chair can move without putting anyone or anything at risk.
- Be extra careful when there are children and physically or mentally challenged people on or near the chair, as these groups cannot always be expected to be able to foresee the possible consequences of its movements.
- Never load more on the chair than the 150kg stated on the loading sign as the maximum load.
- DO NOT use the lifting chair until the person is secured with the seat-fitted seatbelt.

7.2 Seatbelt

- The seat is fitted with a seatbelt to secure the person using the chair.
- DO NOT use the chair until this person is secured with the seatbelt around their hips.

After assembly of the Raizer under the person on the floor, fasten and click the seatbelt around the hips.
7.3 Handling

The Raizer will normally be supplied by your dealer. The chair is ready for use upon delivery.

The Raizer can be transported in the 2 supplied bags. One is a case for the seat itself. The seat is carried by the turquoise handgrip.

The back rest and legs are carried in the bags using carrying straps for hand or back (long strap for shoulders, or two straps as a backpack).

Do not subject the Raizer to severe knocks or blows as this can affect product functionality.

Keep the accompanying remote control* dry and do not subject it to severe blows, such as by throwing it or dropping it, etc. Cleaning may only be done using a well-wrung cloth.

Never use a high-pressure jet or running water to rinse the chair, as this can damage the product.

*Supplementary equipment
8. Functionality

The Raizer is a battery-powered mobile lifting chair which raises a fallen person up to an almost standing position in a few minutes. It can be operated by only a single assistant and requires no physical effort from the assistant aside from a helping hand.

It works by the assistant assembling the Raizer around the fallen person and is operated by using the button panel on the seat or by means of the remote control*. The assistant can raise the fallen person to a sitting or almost standing position ready for relocation.

To use the Raizer, hold down the button for the entire lift. The lifting will stop if the button is released.

9. Prior to use

NB: Ensure that the Raizer is always fully charged. 2 chargers are supplied with the device, and we recommend that it is always on charge when not in use. See also section 12.

The Raizer can be stored wherever desired. However, lifting speed will be reduced if the battery temperature falls below 0ºC. In practice, though, even if stored in a vehicle in a severe frost (-15ºC), if charged, the Raizer will always be able to perform its task.

*Supplementary equipment
10. Operation

10.1 Assembly and use of the Raizer®

1. Ensure that the Raizer® is fully charged before use. To turn it on, press the up or down buttons on the side of the Raizer. A steady green LED indicates a fully-charged battery.

2. Approach to the fallen person

3. Place the seat on the floor by the person's side. Lift the thighs to an angled position. Carefully push the seat in under the thighs.
10.2 Assembly of left-hand side

Items for assembly on the left-hand side are marked with a red circle.

1. Turn the person’s shoulder by a careful push of the elbow.
2. Carefully push the back rest (marked red for left-hand side) in under the person’s shoulder.
3. Slide the back rest in and click into place in the seat.
4. If necessary, place a foot in front of the seat to prevent it from moving forward.
5. Push the rear leg (marked red for left-hand side) onto the shaft and click into place.
6. Slide the front leg (marked red for left-hand side) into the seat and click it into place.
7. Note that the snap-lock is to face outwards.
10.3 Assembly of right-hand side

Items for assembly on the right-hand side are marked with a green circle.

1. Carefully turn the person’s shoulder by a push of the elbow.
2. Carefully push the back rest (marked green for right-hand side) in under the person’s shoulder.
3. Slide the back rest in and click into place in the seat.
4. If necessary, place a foot in front of the seat to prevent it from moving forward.
5. Push the rear leg (marked green for right-hand side) onto the shaft and click into place.
6. Note: right-hand and left-hand rear legs are mounted on the drive shaft so they are parallel, i.e. in the same position as the opposite side.

Slide the front leg (marked green for right-hand side) into the seat and click it in place.

Note that the snap-lock is to face outwards.
Only raise the chair when you are sure that the person’s feet, arms, hands or other body parts are not at risk of being struck or run over by the action of the chair!

THE REAR LEGS
The rear legs are fitted horizontally and lie just above the floor along the shoulder (as in the illustration). Should this not be the case, be careful to fit both rear legs in parallel.

Be aware of the positioning of the shoulders and make sure that the arms are crossed upon the chest, due to the fact that the rear legs move down towards the floor as soon as the up button is pressed. This may put the person’s shoulders and arms at risk of injury if not positioned correctly.

THE FRONT LEGS
Ensure that the person’s legs are together and their feet/legs are not at risk of getting in under a front leg when the chair is raised, as the front legs move toward the floor before the chair begins to lift its user.
10.4 Lifting of person

1. After assembly of the Raizer under the fallen person, wrap and click the seatbelt around their hips.
2. The Raizer is now ready to lift the user.

1. Support the person’s neck with one hand.
2. Press the “up arrow” on the side panel or remote control*
3. The Raizer can be operated from either side.
• Keep pressing the “up arrow” until the person is in the required position.

• The Raizer will automatically stop when the person is in a sitting position.

NB: The Raizer is prevented from moving too far up and will stop automatically in the top position, whereupon a long beep will be emitted.
10.5 Operation of the Raizer® by means of seat buttons

- The rotating legs must be fitted correctly before the Raizer can operate. The green LED will be lit when the device is ready for use. (see items 10.2 and 10.3 of section 10)
- Operate the Raizer with a continuous press of the “up arrow” or “down arrow” buttons.
- The Raizer will switch off automatically after not being used for 10 minutes (it will emit a long beep before powering down).
- Operate the Raizer by continuously pressing one of up/down arrows on the side of the chair.

1. Press here to drive the lifting chair upwards.
   - It will only run for as long as the button is activated.
• Press here to drive the Raizer downwards.
• It will only run for as long as the button is activated.

Press the stop button to deactivate the Raizer.
All movement functions will be turned off.
• Turn the stop button in the direction of the arrows to reactivate the device.

The LED will be lit green when the device is more than 20% charged up.

NB: During operation with a load the LED can change to red – this is normal.

The LED will be lit red to indicate a battery capacity of below 10%.
• In this state there is a max. of 0-5 lifts left in the battery. You will/need to charge the Raizer (see section 12, Charging).
10.6 Operation of the Raizer® by means of remote control

1. Press here to drive the chair upwards.
   It will only run for as long as the button is activated.
   
   NB: In order to operate the remote control the up/down button on the Raizer has to be activated (by a light press of the up/down arrows on the side of the chair)

2. Press here to drive the chair downwards.
   It will only run for as long as the button is activated.

*Supplementary equipment
10.7 How to pair the remote control transmitter and receiver

How to reset transmitter and receiver:

To reset a remote control so it is no longer associated with the Raizer, do as follows:

1. Press the UP (↑) and DOWN (↓) buttons on the remote control at the same time and hold them down for approx. 5 seconds until the control LED on the remote control begins to flash slowly. The remote control is now in installation mode for 2 minutes.

2. Perform the following within the 2 minutes:

Press: UP(↑), UP(↑), DOWN(↓), DOWN(↓), UP(↑), DOWN(↓), UP(↑), DOWN(↓)

When the control LED starts to flash quickly, the remote control is no longer associated with the Raizer.

Pairing of extra remote control

1. Ensure that there is power to the Raizer.

2. The Raizer must be switched off
   The device will switch off automatically after 10 minutes without use (it will emit a long beep before powering down).

3. Press the UP (↑) and DOWN (↓) buttons on the remote control at the same time and hold them down for approx. 5 seconds until the control LED on the remote control begins to flash slowly. The remote control is now in installation mode for 2 minutes.

4. Within these 2 minutes switch on the lifting chair you require associated with the remote control. Press the up/down arrows on the side of the chair.

5. The control LED on the remote control is associated with the lifting chair when it stops flashing.

6. Test the system so as to ensure the pairing has been performed correctly; if not, repeat 1-5 above.

*Supplementary equipment
II. Disassembly

1. Run the Raizer into a horizontal position and disassemble.

2. Put all parts into the carrying bags.
12. Charging of the Raizer®

1. The LED will be lit red to indicate a battery capacity of below 10%.
   NB: This will only light when the chair is powered on.

2. The charger socket is located below the handgrip of the seat.

3. Connect a 220 VAC charger to the socket on the Raizer

4. Or connect a 12 VDC charger to the socket on the Raizer

5. The LED will be lit yellow to indicate charging.

6. A green LED indicates a fully-charged battery.
13. Maintenance

13.1 Cleaning:

The Raizer is not water-proof.

NB: General cleaning may only be done using a well-wrung cloth. DO NOT use running water, a high-pressure jet or a hose directly on the Raizer.

You can disinfect your Raizer using disinfectant sprays such as "Clinell".

13.2 Mechanical maintenance

The mechanical maintenance of the Raizer shall normally only be undertaken in connection with the regular annual service inspection. This is to be undertaken by a qualified service technician in accordance with the checklist in section 14.

Should unexpected errors or unusual sounds occur, contact your dealer at once: www.raizer.com.

13.3 Remote control

2 x AAA batteries are installed in the remote control*. NB: In order to ensure reliable function swap the batteries every 6 months. To swap the batteries, do the following:

1. Loosen the screw on the rear of the remote control*
2. Remove the back panel
3. Loosen the screw for the battery holder
4. Swap the batteries
5. Refit the battery holder
6. Refit the back panel and test

*Supplementary equipment
14. Maintenance checklist

In addition to the general maintenance described in section 13, we recommend routine annual inspections performed by a qualified service technician. The dealer you have bought the Raizer from will offer this service, but if you wish to use another service provider, you as the owner of the Raizer is responsible for ensuring that the chosen service technician is suitably qualified in the product in question.

For safety reasons it is very important that these inspections are maintained, since lacking or improperly performed inspections may result in personal injury.

All service inspections are to be logged in the service log book - see section 15.

### Checklist
- Check all chains are unbroken
- Tighten all screws
- CE mark mounted on the rear cover
- Check all parts for any indentations
- Operating buttons:
  - Arrow up right hand side
  - Arrow down right hand side
  - Arrow up left hand side
  - Arrow down left hand side
  - Step button - the lifting chain stops all transfer
- Remote control up and down buttons are working*
- Overload protection tested
- User manual located at the Raizer
- Service log book
- Switches for rear legs (checkmark LED)
- Sensor for reaching top position (tilt sensor)
- Legs and back rest easy to mount without forking
- Check the click lock system on legs and back rest (5 pcs.)
- Check that the colour marks (red and green) still placed are mounted on the units
- Charger tested - LED lights on when charger connected
- Auto power off (shuts down after 10 min.)

*Optional equipment.

19. Disposal

It is the duty of the owner to dispose of the product in accordance with the regulations applicable at the time. Consider contacting your dealer for advice on disposal.

Please note that the motor unit contains batteries which must be disposed of separately.

20. Right of complaint

The right of complaint encompasses the at any time applicable rules regarding the right of complaint. Read more about this in the terms of sale and delivery. http://www.liftup.dk/en/about-liftup/general-conditions/

NB: If the prescribed service inspections are not maintained the right of complaint may be lost. Failing to perform these inspections can also have serious consequences for product safety. It rests with the customer to ensure compliance with the prescribed service inspections at all times. Cf. Danish Working Environment Authority Executive Order 1109 §14.

Enjoy your new Raizer®

Best regards, Liftup
